RESEARCH INTERESTS

My research interests include how to align LLMs with human preferences and values, with a focus on Recommender Systems and Trustworthy AI.

RESEARCH EXPERIENCE

Playing Language Game with LLMs Leads to Jailbreaking [1]
Supervisor: Prof. Shu Wu (CASIA) and Prof. Kai Chen (IIE, CAS)

- Summary: We proposed a novel jailbreak attack method to exploit large language models (LLMs) by playing custom-designed language games. This method circumvents LLM safety alignments, showcasing the vulnerability of current safety protocols.
- Contribution: Conceptualized the research idea, designed and conducted part of the experiments, authored the entire paper.
- Outcome: In submission to *The 63rd Annual Meeting of the Association for Computational Linguistics* (ACL 2025), providing significant findings for the field of LLM safety.

GOT4Rec: Graph of Thoughts for Sequential Recommendation [2]
Supervisor: Prof. Shu Wu (CASIA)

- Summary: We proposed the GOT4Rec model, which first utilizes the graph of thoughts (GoT) prompting strategy in the sequential recommendation domain to capture short-term interests, long-term interests and collaborative information contained within user history sequences.
- Contribution: Designed the model, conducted all the experiments and authored the entire paper.
- Outcome: In submission to *The 34th International Joint Conference on Artificial Intelligence* (IJCAI 2025), showcasing advances in sequential recommendation systems utilizing LLMs.

Personalized Interest Sustainability Modeling for Sequential POI Recommendation [3]
Supervisor: Prof. Shu Wu (CASIA)

- Summary: We proposed a personalized interest sustainability model for sequential POI recommendation to capture whether each user's interest in specific POIs will sustain beyond the training time, aiding in more accurate and sustainable recommendations.
- Contribution: Designed the model, conducted all the experiments and authored the entire paper.
- Outcome: Accepted by *The 32nd ACM International Conference on Information and Knowledge Management* (CIKM 2023), contributing a new approach to POI recommendation.
